

Professor Pascal Houillier
Université Paris Cité, France

Pascal Houillier is currently Professor of Physiology at Université Paris Cité, France. He previously held the post of Professor of Physiology at Pierre et Marie Curie University from 1997 to 2003. His early training was in Poitiers and then in Paris, subsequently graduating as a Medical Doctor in 1990. His clinical interests lie mainly in the field of diagnosis and management of mineral and electrolyte disorders and management of chronic kidney disease. His research activities include pathophysiology and genetics of inherited tubular dysfunctions, as well as physiology and hormonal control of renal tubular electrolyte transports. He has published on various aspects of renal physiology, pathophysiology and renal tubular disorders.
